INVERTER

The TC7S04 is a high speed C²MOS INVERTER fabricated with silicon gate C²MOS technology.
It achieves high speed operation similar to equivalent LSTTL while maintaining the C²MOS low power dissipation.
The internal circuit is composed of 3 stages including buffer output, which enables high noise immunity and stable output.
The input is equipped with protection circuits against static discharge or transient excess voltage.
Output currents are 1/2 compared to TC74HC series models.
